

Vaginal models are an excellent tool for counseling clients. There are a number of pelvic models on the market, varying in size, shape and price. The following page contains a quick overview of the some of the models available (this list is by no means exhaustive and is offered as a guide only). Not all models will work for every situation and in many cases no models are available for counseling clients. FC2 Female Condom can be demonstrated using nothing more than your hand as a guide for potential users.
